## 3-WIRE CHASING DURALIGHT™

Ø13mm

Ø16mm

This product may be certified by either one of these standards or all of the above.

The method of calculating the consumed power is shown below. i. e. Divide the total length by the bulb spacing to get the total number of bulbs, then multiply by unit power consumption of each bulb to get the total power consumption of specified length.  
The method of calculating the consumed power and the maximum number of bulbs per power foot are shown as below:

• Take DL-3W-44m as an example : 1584 Total No. of bulbs x (6.5V x 0.07A) = 720.72W Total power consumption
